# 1 | Introduction

---

## 1.1 | External History

The Timah language (**tíməh** [tʰiməh]; lit. language, speech) is a constructed language (*conlang*) made by me, Mareck (M.M.N.H.). Its primary goal is simply to be documented entirely in  $\text{\LaTeX}$  (*LaTeX*).

Like most of my constructed languages, it tries to focus balancing between the interesting and the naturalistic, in terms of phonology, grammar, etc. Naturalism, however, is not the primary goal. I have therefore given myself the freedom to take liberties in terms of naturalism.

## 1.2 | Internal History

The Timah language is spoken by the Khokan people (**kʰɔkʰɔtɕəʔe** [kʰɔkʰɔdʒəʔe] lit. many-person). They live on the Lankung Archipelago (**lónkon** [lɔ́ŋgũŋ] lit. our-place)

TODO all of this

### 1.2.1 | Ethnology

The Khokan people are a largely matriarchal and polyandrous society. The practice of polyandry, wherein a woman may take multiple spouses, is due to the scarcity of land and resources.

Many large communities (consisting of several family clans governed by a single clan) are on or around the more mountainous island centers, where terrace-farming is practiced. On the flatter shores, there are smaller communities (consisting of only a few family clans with no single governing clan).

### 1.2.2 | Demography

### 1.2.3 | Geneology

## 2 | Phonology

### 2.1 | Consonants

	<i>Labial</i>	<i>Alveolar</i>	<i>Palatal</i>	<i>Velar</i>	<i>Glottal</i>	<i>Placeless</i>
<i>Nasal</i>	m	n				N
<i>Plosive</i>		t <sup>h</sup> t t <sup>ʔ</sup>	tɕ <sup>h</sup> tɕ tɕ <sup>ʔ</sup>	k <sup>h</sup> k k <sup>ʔ</sup>	ʔ	
<i>Fricative</i>		s <sup>h</sup> s s <sup>ʔ</sup>			h	
<i>Approximant</i>	w	l	j			

Figure 2.1: Consonant Phonemes

- /n t<sup>h</sup> t t<sup>ʔ</sup>/ are dental; /s<sup>h</sup> s s<sup>ʔ</sup> l/ are alveolar.
- /tɕ<sup>h</sup> tɕ tɕ<sup>ʔ</sup>/ are alveolo-palatal; /j/ is palatal.
- /h/ is articulated with true frication of the glottis, i.e., it is not a voiceless glottal approximant.
- /N/ is a nasal coda archiphoneme, i.e., not an uvular nasal<sup>1</sup>.
- The aspirated obstruents /t<sup>h</sup> tɕ<sup>h</sup> k<sup>h</sup> s<sup>h</sup>/ may be accompanied by slight breathy-voice on the following vowel.
- The fortis obstruents /t<sup>ʔ</sup> tɕ<sup>ʔ</sup> k<sup>ʔ</sup> s<sup>ʔ</sup>/ are articulated with laryngeal tension, and may be accompanied by slight creaky-voice on the following vowel.

#### 2.1.1 | Consonant Allophony

- /m n/ surface as the implosives [ɓ ɗ] word-initially.
- The coda archiphoneme /N/ surfaces as [n ɲ ŋ] before alveolar, (alveolo-)palatal, and velar plosives, respectively. It surfaces as nasalization of the preceding vowel before all other consonants. It surfaces as [ŋ] word-finally after non-back vowels, and as [ŋ̃m] word-finally after the back vowels /o ɔ/ and before the labio-velars [k̠p<sup>ʔ</sup> k̠p k̠p<sup>h</sup>].
- The aspirated obstruents /t<sup>h</sup> tɕ<sup>h</sup> k<sup>h</sup> s<sup>h</sup>/ are deäspirated to [t tɕ k s] intervocalically and after /w j N/.
- The tenuis obstruents /t tɕ k s/ are voiced to [d dɕ g z] intervocalically and after /w j N/.
- /k<sup>h</sup>/ surfaces as [x] before [a].
- The velars /k<sup>ʔ</sup> k k<sup>h</sup>/ surface as labio-velars [k̠p<sup>ʔ</sup> k̠p k̠p<sup>h</sup>] before the back vowels /o ɔ/. [k̠p] is voiced to [g̠b] and [k̠p<sup>h</sup>] is deäspirated to [k̠p] intervocalically and after /w j N/.

<sup>1</sup>Yes, I say /ən 'uvjəlɔ/. Deal with it.

- /n/ is palatalized to [ɲ] before [i] word-medially.
- The sibilants /s<sup>h</sup> s s<sup>ʔ</sup>/ are palatalized to [ɕ<sup>h</sup> ɕ ɕ<sup>ʔ</sup>] before [i]. [ɕ] is voiced to [ʑ] and [ɕ<sup>h</sup>] is deäspirated to [ɕ] intervocalically and after /w j ɲ/.
- /l/ surfaces as [ɾ] intervocalically and after /w j ɲ/.
- /w/ surfaces as [ʋ] before [i].

### 2.1.2 | Dialectal Variations of Consonants

- In some<sup>[which?]</sup> dialects, the fortis plosives /t<sup>ʔ</sup> tɕ<sup>ʔ</sup> k<sup>ʔ</sup> s<sup>ʔ</sup>/ may surface as ejectives [t' tɕ' k' (t)s'] or geminates [tt ttɕ kk ss-tts].
- In some<sup>[which?]</sup> dialects, the alveolo-palatals /tɕ<sup>h</sup> tɕ tɕ<sup>ʔ</sup>/ may surface as alveolar affricates [ts<sup>h</sup> ts ts<sup>ʔ</sup>] or true palatals [c<sup>h</sup> c c<sup>ʔ</sup>].
- In some<sup>[which?]</sup> dialects, the lateral [l] has merged with either /j/ or /n/.
- Depending on dialect<sup>[which ones?]</sup> and idiolect, the glottal fricative /h/ may variously surface as any of [x χ ɦ ɦ̃].
- Depending on dialect<sup>[which ones?]</sup> and idiolect, the lateral /l/ may variously surface as any of [ɭ ɭ̥ ɭ̥̊ ɭ̥̊̊ ɭ̥̊̊̊ ɭ̥̊̊̊̊].

## 2.2 | Vowels

Figure 2.2: Vowel Phonemes

- All vowels may occur as long or short (see § 2.6.1)
- /e/ is true mid [e]<sup>2</sup>.
- /a/ is near-front [a] (i.e., not central [ä]).

<sup>2</sup>[ɛ ɔ] will be transcribed as [e o] for the sake of brevity.

### 2.2.1 | Vowel Allophony

- All vowels are nasalized before nasal consonants.
- /i/ surfaces as [i] after the velars /k<sup>h</sup> k k<sup>ʔ</sup>/ and before coda [ŋ].
- /o ɔ/ raise to [u ɔ]<sup>2</sup> word-finally in open syllables, after the velars /k<sup>h</sup> k k<sup>ʔ</sup> w/, and before coda [ŋ].
- /a/ surfaces as [æ-ɛ] after the palatals /tɕ<sup>h</sup> tɕ tɕ<sup>ʔ</sup> j/ and before coda /j/.

### 2.2.2 | Dialectal Variations of Vowels

- Some<sup>[which?]</sup> dialects have merged the back vowels /o ɔ/ into true mid [ɔ].
- Some<sup>[which?]</sup> dialects have merged the front vowels /i e/ into [i-ɪ].
- In some<sup>[which?]</sup> dialects, the back vowels /o ɔ/ surface as [ɣ<sup>β</sup> ʌ<sup>β</sup>], i.e., they are rounded with lip compression instead of protrusion.

## 2.3 | Phonological Processes

### 2.3.1 | Stress

Stress placement in Timah is phonologically determined and is not phonemic.

Stress occurs on the left-most live syllable, wherein a syllable ending in a sonorant /N w j/ or long vowel are grouped as *live* and those ending in /ʔ h/ are grouped as *dead*.

Open syllables (i.e., syllables with a short vowel and no coda) are superseded by live syllables but take precedence over dead syllables in terms of stress hierarchy.

### 2.3.2 | Vowel Harmony

Timah displays vowel harmony based on tongue root position.

Vowels are divided into two classes: +ATR and –ATR, traditionally grouped as *light* and *heavy* vowels.

+ ATR (Light)	i	ə	o
– ATR (Heavy)	e	a	ɔ

Figure 2.3: Vowel Harmony

Vowel harmony is very pervasive; harmony spreads rightwards from a stressed vowel until it is terminated.

Vowel harmony is terminated after dead syllables (i.e., syllables ending in /ʔ h/) and non-harmonizing morphemes, such as clitics.

Figure 2.4: Harmony Spread

### 2.3.3 | Obstruent Weakening

Initial obstruents in compound words, here represented by  $\omega_1\omega_2$ , may undergo weakening. If an obstruent is present initially in  $\omega_2$ , it undergoes one of the following mutations.

$t^?$	$t^h$	$t$
$t\zeta^?$	$t\zeta^h$	$t\zeta$
$k^?$	$k^h$	$k$
$s^?$	$s^h$	$s$
$?$		$h$

Figure 2.5: Obstruent Weakening

## 2.4 | Obstruent Contraction

In non-initial sequences of  $P_1VP_2V$ , wherein  $P_*$  represents any obstruent and  $V$  represents any vowel, the sequence  $P_1VP_2$  is contracted to  $P_3$ . This does not apply within roots (but can occur at root boundaries e.g., after inflection and in compounds), and applies after obstruent weakening.

$P^h$  represents the aspirated obstruents  $/t^h t\zeta^h k^h s^h h/$ ,  $P$  represents the tenuis obstruents  $/t t\zeta k \text{ }^?^2/$ , and  $P^?$  represents the fortis obstruents  $/t^? t\zeta^? k^? s^? \text{ }^?^2/$ . The glottals  $/? h/$  only affect contraction when they occur as  $P_2$ .

$P^h$	$P^h, P$	$P^h$
$P^h$	$P^?$	$P$
$P$	$P^h$	$P^h$
$P, P^?$	$P, P^?$	$P^?$
$P^?$	$P^h$	$P$

Figure 2.6: Obstruent Contraction

The specific place and manner of articulation of  $P_3$  is dependent on an hierarchy of the obstruents in the positions  $P_1$  and  $P_2$ , i.e., obstruents lower in the hierarchy assimilate to those higher in the hierarchy.

$$k^* > t\zeta^* > t^* > s^* > ?, h$$

Figure 2.7: Obstruent Hierarchy

If there is a tone associated with the elided vowel, it and all tones left of it are shifted one syllable leftward until a toneless syllable (cf. § 2.5.2).

<sup>2</sup>/ $^?$  is classed as tenuis when it is either  $P_1$  or  $P_2$ , and as both tenuis and fortis when it is  $P_3$

## 2.5 | Tone

Timah has two distinct tonemes: *high* and *low*, as well as the option of being unmarked for tone. Tonally unmarked syllables are phonetically realized identically to the low tone, but unlike low tone, it can be affected by various tonological processes such as *tone association* and *tone mobility*.

### 2.5.1 | Tone Association

Tone association is the process in which the tone of a given syllable spreads (or doesn't spread) to the preceding toneless syllable.

Floating tones follow similar rules, but can associate in either direction.

Figure 2.8: Tone Association

### 2.5.2 | Tone Mobility

Tones in Timah may move from their inherent position to a different surface position.

#### 2.5.2.1 | Leftward Tone Shift

At the end of a Prosodic Unit (PU), all tones are shifted one syllable leftward until a toneless syllable, leaving the final syllable toneless. Unlike tone association, tone shift is not blocked by dead syllables.

TODO(?) more tone mobility

Figure 2.9: Leftward Tone Shift

## 2.6 | Phonotactics

### 2.6.1 | Syllable Structure

$$CV(T)(V^3(T)|H|S)$$

$$H = \{?,h\}$$

$$S = \{N,w,j\}$$

$$T = \{ó,ò\}$$

Figure 2.10: Syllable Structure

#### 2.6.1.1 | Restraints

These phonotactic restraints govern allomorphy.

- The nasal coda /N/ cannot precede a nasal /m n/.
- The glottal codae /? h/ cannot precede another glottal /? h/.
- The glottal coda /h/ cannot precede a sonorant /m n w l j/.
- The glides /w j/ cannot precede another glide /w j/.
- The glide /w/ cannot follow /o ɔ/.
- The glide /j/ cannot follow /i e/.

In roots, the following coda reductions occur if one of the former rules is violated. The coda is deleted and lengthens the preceding vowel (if short). It may also apply tone to the long vowel.

$$\begin{array}{ccc} ? & & \underline{\circ\acute{}} \\ h & \rightarrow & \underline{\circ\grave{}} \\ N\ w\ j & & \underline{\circ\circ} \end{array}$$

Figure 2.11: Coda Reduction

<sup>3</sup>Long vowel codae must be homorganic in vowel quality, but not necessarily in tone.

## 3 | Prosody

---

### 3.1 | Isochrony

Timah is a moraically-timed language, i.e., the duration of every mora is approximately equal. Nuclei and live codae both count as one mora; onsets and dead codae do not contribute to mora count (see § 2.3.1).

### 3.2 | Prosodic Hierarchy

Prosodic units can be separated into a hierarchy of sub-units.  
TODO all of this

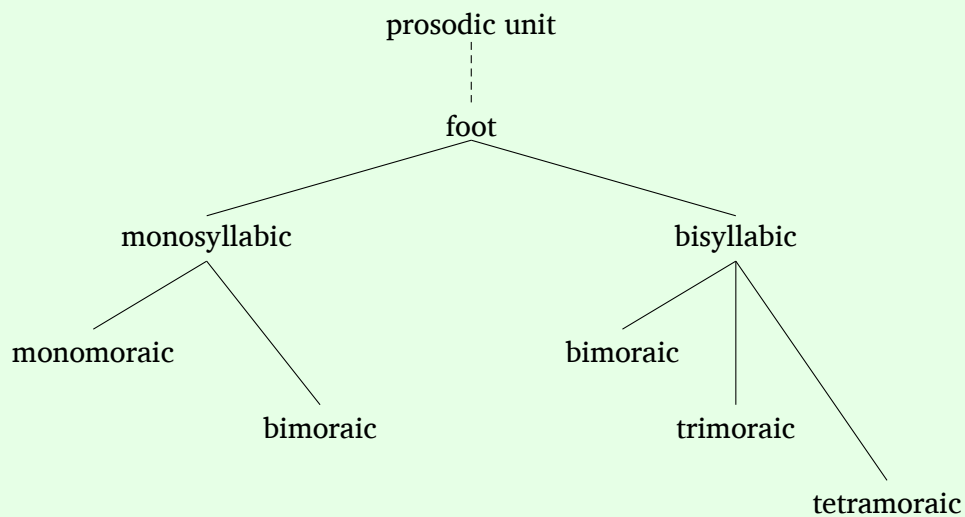

Figure 3.1: Prosodic Hierarchy

### 3.3 | Intonation

TODO all of this

## 4 | Orthography

The Timah language uses the *Loma* script (**lóma** [lómà] lit. *smooth-word*), a defective abugida that was borrowed from a neighboring language *Maryu* (Timah **májlo** [bájɾò]). It was originally written on the large, durable leaves of the **sʰólów** ([sʰóɾów]) plant, which contributes to the script's curled aesthetic.

TODO native, script, other adaptations

### 4.1 | Other Scripts

#### 4.1.1 | Romanization

	<i>Labial</i>	<i>Alveolar</i>	<i>Palatal</i>	<i>Velar</i>	<i>Glottal</i>	<i>Placeless</i>
<i>Nasal</i>	<m>	<n>				<ŋ> <sup>1</sup>
<i>Plosive</i>		<th d t>	<ch j c>	<kh g k>	<h> <sup>1</sup>	
<i>Fricative</i>		<sh x s>			<h>	
<i>Approximant</i>	<w>	<l>	<y>			

Figure 4.1: Romanization (Consonants)

Figure 4.2: Romanization (Vowels)

<sup>1</sup>/N ʔ ə/ may alternatively be romanized as <n 'v>, respectively.

## 4.1.2 | Tibetan

	Labial	Alveolar	Palatal	Velar	Glottal	Placeless
Nasal	⟨མ⟩	⟨ན⟩				⟨ཙྰ⟩ <sup>2</sup>
Plosive		⟨ཐ ད ཏ⟩	⟨ཆ ཇ ཉ⟩	⟨ཀ ཁ ག⟩	⟨འ, ཨ⟩ <sup>2</sup>	
Fricative		⟨ཤ ཅ ས⟩			⟨ད, ཨམ⟩ <sup>2</sup>	
Approximant	⟨ཤ, ཤྱ⟩ <sup>2</sup>	⟨ར⟩	⟨ཡ, ཡྲ⟩ <sup>2</sup>			

Figure 4.3: Tibetan (Consonants)

Figure 4.4: Tibetan (Vowels)<sup>2</sup>

## 4.1.3 | Mkhedruli

	Labial	Alveolar	Palatal	Velar	Glottal	Placeless
Nasal	⟨ཐ⟩	⟨ན⟩				⟨ཙྰ⟩ <sup>6</sup>
Plosive		⟨ཐ ཏ ཏྱ⟩	⟨ཆ ཇ ཉྱ⟩	⟨ཀ ཁ ག⟩	⟨འ⟩	
Fricative		⟨ཤ ཅ ས⟩			⟨ཨྱ⟩	
Approximant	⟨ཙ⟩	⟨རྩ⟩	⟨ཡ⟩			

Figure 4.5: Mkhedruli (Consonants)

Figure 4.6: Mkhedruli (Vowels)

<sup>2</sup>⟨ཙྰ⟩ is a filler letter. If present, the second element is the coda form for consonants, and the long form for vowels.

4.1.4 | Hacm

	Labial	Alveolar	Palatal	Velar	Glottal	Placeless
Nasal	⟨v⟩	⟨n⟩				⟨ <sup>n</sup> ⟩
Plosive		⟨l <sup>h</sup> ɒ f⟩	⟨l <sup>h</sup> ɥ l⟩	⟨l <sup>h</sup> φ l⟩	⟨p⟩	
Fricative		⟨j <sup>h</sup> l j⟩			⟨h⟩	
Approximant	⟨o⟩	⟨l⟩	⟨s⟩			

Figure 4.7: Hacm (Consonants)

Figure 4.8: Hacm (Vowels)

### 5.1 | Sentence Structure & Word Order

Word order in Timah is primarily *subject-object-peripheral-verb* in independent clauses, and secondarily *verb-initial head-final* in dependent clauses. Only the verb must be present. In copular phrases (see § 8.8), the word order is always *subject-copula-attribute*, wherein the *attribute* is what is being associated with the subject of the copular phrase.

The *subject* is the thing that performs the verb; the verb may grammatically agree with the subject's *person*, *probability*, and *integrity*. It consists of one or more noun phrase(s).

The (direct) *object* is the thing that the verb is directly performed upon; the verb may agree with the salience, or level of affectedness, of the object. It, like the subject, consists of one or more noun phrase(s).

The *peripheral*, or indirect/oblique object, is the thing that the verb is indirectly performed upon. It is usually marked with a *postposition* (see § 7.4) or *oblique case* (see § 7.3.2) and consists of noun or postpositional phrase(s).

The *verb* is the action that is performed within a clause. It consists of one or more *verb phrase(s)*. Some verbs may not take a subject or object (see § 8.2).

Dependents are placed before their head unless noted otherwise.

#### 5.1.1 | Dependent Clauses

*Dependent* clauses in Timah are introduced by one of three clausal conjunctions (a subset of *verbal conjunctions*, see § 10.1) or a *relative pronoun* (see § 7.2.3). They are placed between a dependent and independent clause.

They take *verb-initial head-final* word order, wherein the verb is placed initially and the head of the dependent argument is placed finally, with the background argument (i.e., the argument of the dependent clause that is not the head) placed medially. Thus, the word order of a dependent clause may be either *verb-object-peripheral-subject* or *verb-subject-object-peripheral*. In the former, the subject is the head; in the latter, the object is the head.

All dependent clauses are deranked (see § 8.5).

Relative clauses are placed before their head noun; only the subject and object may be relativized, and must take the same role in the relative clause as in the main clause.

- *nəj* : introduces basic dependent clause
- *ten* : introduces causal dependent clause
- *motó* : introduces consecutive dependent clause

The difference between using the conjunction *nəj* as a relativizer and using a relative pronoun (see § 7.2.3) is that of referentiality. With non-referential heads and heads unmarked for referentiality, *nəj* is used as a relativizer. With referential heads, one of the relative pronouns is used as a relativizer (cf. § 7.3.3).

## 5.2 | Alignment

The morphosyntactic alignment in Timah is a type of dually-split-ergative that is dependent of factors of *perfectiveness*, *valency*, and *volition*.

*Perfectiveness* describes the completeness of the verb, *valency* describes the number of arguments of the verb (in this case, a split between one or more than one), and *volition* describes the degree of control or intent concerning the verb (which is directly related to volitional classes, see § 8.3). In terms of alignment, all these factors are binary, i.e., [*perfective*|*non-perfective*], [*monovalent*|*polyvalent*], [*volitional*|*non-volitional*].

The *ergative-absolutive* alignment is used obligatorily in polyvalent clauses wherein the subject is specified as perfective.

The *active-stative* alignment is used obligatorily in monovalent clauses wherein the subject is specified as perfective and non-volitional as well as in monovalent clauses wherein the subject is specified only as non-perfective.

Either alignment is possible when the subject in polyvalent clauses is specified as non-perfective, as well as in monovalent clauses wherein the subject is specified as both perfective and non-volitional. Which alignment is used is pragmatically determined (see § 14.1).

			<i>Erg.-Abs.</i>	<i>Either</i>	<i>Act.-Stat.</i>
<i>Mono.</i>	<i>Pfv.</i>	<i>Vol.</i>		×	
		<i>Nvol.</i>			×
	<i>Npfv.</i>	<i>Vol.</i>			×
		<i>Nvol.</i>			×
<i>Poly.</i>	<i>Pfv.</i>	<i>Vol.</i>	×		
		<i>Nvol.</i>	×		
	<i>Npfv.</i>	<i>Vol.</i>		×	
		<i>Nvol.</i>		×	

Figure 5.1: Alignment

Timah is secundative, with the *theme* (object that is directed toward the recipient) of a trivalent verb (i.e., a polyvalent verb that takes three arguments, see § 8.2) being marked by the a postposition (see § 7.4).

## 5.3 | Repeat Argument Dropping

In ergative-absolutive statements, a repeated absolutive argument can be dropped. In active-stative statements, a repeated subject can be dropped. Switching grammatical voice (see § 8.5.3) allows the opposing argument to be dropped.

## 5.4 | Clitics

What are termed *clitics* in Timah are actually phrasal affixes, i.e., they are affixes that attach to the initial or final component of their phrase. These are glossed and referred to as clitics, but may also be called *gruppenflexion* or the aforementioned phrasal affixes.

## 6 | Lexical Categories & Properties

### 6.1 | Lexical Categories & Roots

There is largely no lexical noun-verb distinction in Timah, i.e., most content words can act either as a noun or as a verb. The exceptions are the closed classes of *true nouns* and *true verbs*, collectively called *limitives* (see §§ 7.1 and 8.1). Non-limitives, collectively called *formatives*, are further divided into two root classes: *constant* and *mutable* roots.

#### 6.1.1 | Constant Roots

*Constant* roots consist of one or more sequences of CV(F), and inflect primarily by affixation. These are more common than mutable roots, especially in true nouns and verbs.

#### 6.1.2 | Mutable Roots

*Mutable* roots consist of a set of consonants. Each consonant within a consonantal root may have a tone associated with it.

Consonantal roots may take one of many *consonantal templates*, which describe the positioning of the individual consonants (marked by subscripts) in a root as well as tone-accepting positions (marked by superscripts). Long vowels may only occur in the environment  $\_ \{CV, \#\}$  (i.e., before a single consonant or at a word boundary). Floating tones migrate to the closest tonally-unmarked long vowel mora, if present.

$(\sigma_a)$  and  $(\sigma_b)$  are the optional *leading* and *trailing syllables*, respectively. They are part of the root (i.e., not part of the template).  $(\sigma_a)$  consists of an onset, nucleus, and optional coda.  $(\sigma_b)$  consists of a nucleus and coda. The nucleus of  $(\sigma_b)$  is elided in the environment  $V\_$  (i.e., following a vowel).  $(C_a)$  and  $(C_b)$  are the optional *leading* and *trailing consonants*, respectively. If unmarked,  $C_1$  is reduplicated and epenthetically inserted as  $(C_a)$ .  $(C_b)$  is unaffected if unmarked.

- 1 :  $(\sigma_a)\underline{C}_1V^1\underline{C}_2V^2(C_b)(\sigma_b)$
- 2 :  $(\sigma_a)\underline{C}_1V^1\underline{C}_2-\circ^2(\sigma_b)$
- 3 :  $(\sigma_a)(C_a)V\underline{C}_1V^1\underline{C}_2V^2(C_b)(\sigma_b)$
- 4 :  $(\sigma_a)(C_a)V^1\underline{C}_1V^2\underline{C}_2(\sigma_b)$
- 5 :  $(\sigma_a)(C_a)V^1\underline{C}_1\underline{C}_2V^2(C_b)(\sigma_b)$

Consonant templates are notated as  $\#[(C)V, \dots, V]$ , wherein  $\#$  is the template form number, and  $[(C)V, \dots, V]$  is the optional leading and trailing syllables, leading consonant, and a list of the constituent vowels. Mutable roots are notated as  $(\sigma_a) \cdot C^T \cdot C^T \cdot (\sigma_b)$ , wherein  $C$  is a consonant and  $^T$  is an optional toneme (◌◌ or ◌◌). These can be combined to form  $\#[(C)V, \dots, V]\{C^T \cdot C^T \cdot (-C^T)\}$

If  $C_\#$  is in the environment  $\_ \{C, \#\}$  (i.e., before another consonant or at a word boundary), it merges into a coda consonant.

m n		N
t* k*	→	?
tɕ* s*		h
l j		j

Table 6.1: Coda Mergers

Additionally, if there is an illegal coda-onset cluster, it undergoes a coda reduction (see § 2.6.1.1).

## 6.2 | Integrity

Grammatical class, or *integrity* in Timah is divided by compositional integrity, or completeness of the item. The *complete* class is further divided by animacy. Animacy distinction may not always occur in inflections.

- **Complete**; *the item is viewed in its entirety; the item is sufficient, complete, whole*; CMPLT
  - **Animate**; *living, mobile, heat, abstract*; ANIM
  - **Inanimate**; *non-living, immobile, cold, concrete*; INAN
- **Incomplete**; *the item is viewed partially; the item is deficient, incomplete, condensed*; NCMPLT

Generally, these refer to the compositional integrity within the context of the situation.  
 TODO example sentences

## 6.3 | Probability

Grammatical number in Timah is divided not by amount, but *probability*, i.e., if the amount is likely or unlikely to change.

- **Stable**; *the amount is not likely to change*; STBL
- **Unstable**; *the amount is likely to change*; NSTBL
- **Panstable**; *it is unknown if the amount is likely or unlikely to change*; PNSTBL

Generally, these refer to the probability to change within the context of the situation.  
 TODO example sentences

## 7 | Nouns

### 7.1 | True Nouns

*True nouns* consist of a set of nouns that cannot be used as verbs. True nouns can stand independent but can also be used to modify other nouns. See App. A for a list of true nouns.

### 7.2 | Pronouns

*Pronouns* are a subset of true nouns that take the function of another noun or noun phrase.

#### 7.2.1 | Personal

*Personal* pronouns decline for probability, person, animacy (in 3<sup>rd</sup> person), case, and integrity.

		Agt.	Pat.	Erg.	Assoc.	Loc.
Stbl.	1	lə	ləhi	jəN	s <sup>h</sup> aj	tɕ <sup>h</sup> ə
	2	nó	nɔ		nò	nə
	3	táʔ	táhi	tɕàN	kéh	té
			han			
Nstbl.	1	to	tò		t <sup>ʔ</sup> áw	jé
	2	nɔ́	nɔ́		néj	tɕɔ
	3	t <sup>ʔ</sup> óʔ	t <sup>ʔ</sup> óhi	tɕ <sup>h</sup> ON	kèè	k <sup>h</sup> əw
			t <sup>h</sup> ON			

(a) Complete

	Agt.	Pat.	Erg.	Assoc.	Loc.
1	ká	ke	tàʔ	tɕà	ləj
2	nɔ́	náw		nəw	no
3	sésá	seh		kín	s <sup>ʔ</sup> əw

(b) Incomplete

Figure 7.1: Personal Pronouns

#### 7.2.2 | Possessive

*Possessive* pronouns decline for person (of the possessor), integrity, and animacy (of the possessed). They indicate ownership and relation. They are placed after their head noun.

	<i>Complete</i>		<i>Incomplete</i>
	<i>Animate</i>	<i>Inanimate</i>	
1	lǎN	jǎ	sǎN
2	ná	náj	wan
3	tóó	tɕóó	kaá

Figure 7.2: Possessive Pronouns

### 7.2.3 | Relative/Interrogative

*Relative/interrogative* pronouns decline for integrity, probability, and domain. They are used to introduce relative clauses and to mark specific characteristics of a question.

		<i>Personal</i>	<i>Location</i>	<i>Proportion</i>	<i>Manner</i>	<i>Reason</i>
<i>Complete</i>	<i>Stbl.</i>	ʔǎsǎ	kʰǎnaj	siló	sáj	sʰǎh
	<i>Nstbl.</i>	tansǎ	kʰinhǎ			
<i>Incomplete</i>		ʔehi	kéhe	saʔíí	sǎmóó	sʰǎjna

Figure 7.3: Relative/Interrogative Pronouns

### 7.2.4 | Demonstrative

*Demonstrative* pronouns decline for number, proximality, laterality, and deictic position. They express spatial and temporal position relative to the speaker (see § 14.2.1). Demonstratives of *proportion* and *manner* express to what extent and in what way, respectively.

They may modify a noun or pronoun, or stand on their own. They are placed after the noun they are modifying.

		<i>Anterior</i>		<i>Posterior</i>				
		<i>Sinister</i>	<i>Dexter</i>			<i>Anterior</i>	<i>Posterior</i>	<i>Indefinite</i>
<i>Stbl.</i>	<i>Prox.</i>	tàá	kò	mɔ̀N	<i>Prox.</i>	s <sup>h</sup> à	kɔ?	nəj

<i>Man.</i>	<i>Prox.</i>	wój	misòN
	<i>Dist.</i>	kèN	

(c) Proportion &amp; Manner

Figure 7.4: Demonstrative Pronouns

The laterally-neutral distal demonstratives *kʔitò* and *tekí* may be compounded with a medial or proximal sinister demonstrative (that matches in integrity) to form laterally-neutral medial and proximal demonstratives.

(1) *tàákʔitò*

tàá- kʔitò  
 DEM.ANT.SIN.PROX.STBL- DEM.ANT.DIST.STBL  
this (in front of me)

- **Proximal**; *able to be seen and heard by speaker*; PROX
- **Medial**; *able to be seen by speaker and/or seen and heard by listener*; MED
- **Distal**; *able to be seen by speaker; may be indistinct or non-visible*; DIST
- **Anterior**; *in front of the speaker; associated with the past*; ANT
  - **Sinister**; *to the left of the speaker; associated with volitional events*; SIN
  - **Dexter**; *to the right of the speaker; associated with non-volitional events*; DEX
- **Posterior**; *behind the speaker; associated with the future*; POST

## 7.3 | Declensions

Figure 7.5: Declension Slots

### 7.3.1 | Noun Classes

Noun classes in Timah are separated into the groups *complete* and *incomplete*, which are associated with semantic wholeness or entirety of the noun (see § 6.2).

The *complete* group is further divided into the classes *animate* and *inanimate*. The *panstable* number is generally associated with mass nouns.

	Complete		Incomplete
	Animate	Inanimate	
<i>Stbl.</i>	∅-	kaw-, kɔ-	wí-
<i>Nstbl.</i>	tɔ-	jé-	
<i>Pnstbl.</i>	na(N)-	∅-	

Figure 7.6: Noun Classes

### 7.3.2 | Cases

- **Agentive** : In active-stative clauses (see § 5.2), this marks the subject of a multivalent verb (see § 8.2) or the volitional subject of a monovalent verb. In ergative-absolutive clauses, this marks the object of a multivalent verb or the subject of a monovalent verb; AGT
- **Patientive** : In active-stative clauses, this marks the object of a multivalent verb or the non-volitional subject of a monovalent verb; PAT
- **Ergative** : In ergative-absolutive clauses, this marks the subject of a multivalent verb. This can also be used as an inalienable genitive; ERG
- **Associative** : This marks genitive and genitive-like relations, which can be further clarified using postpositions; ASSOC
- **Locative** : This marks physical and/or temporal location and movement that can be further clarified using postpositions; LOC

	Complete	Incomplete		Complete	Incomplete
<i>Agt.</i>	-Ø	-N-(ó)	<i>Agt.</i>	-Ø	-té
<i>Pat.</i>	-h	-h-(ó)	<i>Pat.</i>	-si	-sén
<i>Erg.</i>	-ʔ	-ho	<i>Erg.</i>	-kʔi	-k <sup>h</sup> o
<i>Assoc.</i>	-wɔ		<i>Assoc.</i>	-kɔ	
<i>Loc.</i>	-tɕó	-je	<i>Loc.</i>	-tɕó	-se
	(a) Open			(b) Closed	

Figure 7.7: Cases

The *associative* and *locative* cases, collectively called *peripheral cases*, may be accompanied by a postposition (see § 7.4). In isolation, the associative takes the meaning of an alienable genitive (in contrast to the ergative, which may have an inalienable genitive meaning) and the locative takes on the meaning of a general locative or temporal (i.e., marking place or time).

### 7.3.2.1 | Declension of Mutable Roots

See § 6.1.2 for mutable root templates.

		Complete		Incomplete
		Animate	Inanimate	
	<i>Stbl.</i>	1[o,i]	4[kɔɔ,e]	
<i>Agt.</i>	<i>Nstbl.</i>	3[tɔ,ɔ,i]	3[Ci,e,a]	3[wi,o,i]
	<i>Pnstbl.</i>	3[na,ɔ,i]		
	<i>Stbl.</i>	1[o,eh]	3[ka,e,ah]	
<i>Pat.</i>	<i>Nstbl.</i>	5[Cɔ,eh]	4[je,ə]	4[wee,e]
	<i>Pnstbl.</i>	3[naa,e,ah]		
	<i>Erg.</i>	5[me,əʔ]		1[Ce,o]
	<i>Assoc.</i>	1[Ce,ɔɔ]		
	<i>Loc.</i>	1[nee,ɔj]		2[e]

Figure 7.8: Declensions of Mutable Roots

### 7.3.3 | Article Enclitics

Articles in Timah decline for referentiality, visibility, and probability. They attach as enclitics to the final element of their head noun phrase.

*Referential* describes a specific instance of the class comprised of the given entity, while *non-referential* describes any instance of the class comprised of the given entity.

	<i>Referential</i>		<i>Non-referential</i>	
	<i>Visible</i>	<i>Non-visible</i>	<i>Visible</i>	<i>Non-visible</i>
<i>Stbl.</i>	=mɔɔ	=han	=sʔi	=tʔéʔ
<i>Nstbl.</i>	=kʔə	=mé	=kʰəN	=tɕáá
<i>Pnstbl.</i>		=já		=kʰɔɔ

Figure 7.9: Article Enclitics

## 7.4 | Postpositions

There are two types of postpositions in Timah: those of *association* and those of *location*. These types are directly related to the *associative* and *locative* noun cases, as the Postpositional Object must take the respective case of its postposition.

### • Associative Postpositions

- lí : *accompaniment/use; basic theme of trivalent verb*
- kʔe : *lack of accompaniment/use; negatory theme of trivalent verb*
- kʰɔno : *intent of benefit/purpose; beneficial/purposive theme of trivalent verb*
- sɪ : *intent of reference/relation*
- tɕé : *state of being*
- kʰò : *change of state*
- kéh : *similarity/comparison*
- tʔɔka : *causation*

### • Locative Postpositions

- tí : *movement toward*
- sʰì : *movement away from*
- mí : *movement onto*
- tɕɔɔ : *movement under*
- tʰɪsé : *movement into*
- siiʔi : *movement out of*
- tɕoli : *beginning of movement/time*
- ʔaɪ : *end of movement/time*
- kaɪʔɔ : *movement through, by way of, adjacent to*
- soʔa : *in front of/below/before*
- sàkə : *behind/above/after*
- seeʔá : *between, amidst, within*
- sɔtʰe : *surrounding, around, encompassing*

## 7.5 | Noun Reduplication & Quantification

Many nouns (including pronouns) may optionally be fully reduplicated and attached to their root to indicate plurality or intensity. Reduplication to mark plurality is never used when a numeral is used to quantify the root noun.

- (2) **tɕəŋi**  
 tɕəŋi  
 person  
a person
- (3) **tɕəŋitɕəŋi**  
 tɕəŋi ~tɕəŋi  
 person ~person  
people

In some nouns, full reduplication may also be used to derive mass nouns.

- (4) **hòn**  
 hòn  
 dog  
a dog
- (5) **hònհòn**  
 hòn -hòn  
 dog -dog  
a pack of dogs

Plural reduplication can be used in conjunction with integrity in order to quantify the arguments of a verb. Marking an argument as both plural and complete indicates that all participants performed the action together. Marking an argument as both plural and incomplete indicates that each of the participants performed the action separately.

- (6) **ketehketeh tálajkálátá**  
 Ø- keteh -keteh -Ø tá= laj- kála  
 CMPLT.ANIM.STBL- child -child -AGT.CMPLT 3.stbl.cmplt.anim.agt= PFV.REAL- fish  
 -tá  
 -AV.NINVST  
the children all went fishing (collectively)
- (7) **wíketehketehté sálajkálátá**  
 wí- keteh -keteh -té sá= laj- kála -tá  
 NCMPLT- child -child -AGT.NCMPLT 3.ncmplt.agt= PFV.REAL- fish -AV.NINVST  
the children each went fishing (individually)

## 8 | Verbs

---

### 8.1 | True Verbs

*True verbs* consist of a set of verbs that cannot be used as nouns. See App. B for a list of true verbs.

### 8.2 | Valency Classes

There are four main valency classes in Timah: *avalent*, *monovalent*, *ambivalent*, and *polyvalent*.

- **Avalent**; *zero arguments*; AVAL
- **Monovalent**; *one argument*; MVAL
- **Ambivalent**; *one or two arguments*; BVAL
- **Polyvalent**; *two or more arguments*; PVAL

Ambivalent and polyvalent verbs that take exactly two arguments are grouped as *divalent*, polyvalent verbs that take exactly three arguments are grouped as *trivalent*, and polyvalent verbs that take two or more arguments are grouped as *multivalent*. These terms (*divalent*, *trivalent*, *multivalent*) are used only in analysis and meta-grouping.

Copulae (see § 8.8) are considered monovalent.

### 8.3 | Volitional Classes

Verbs are inherently classed as either *volitional* or *non-volitional*. These classes determine the case of the subject in monovalent verbs in active-stative-aligned clauses. They denote inherent intent of the agent, regardless of the situational intent. They directly affect alignment (see § 5.2).

- **Volitional**; *denote an action that is intentionally performed by the subject*; VOL
- **Non-volitional**; *denote an action that is accidentally performed by the subject*; NVOL

### 8.4 | Verbal Reduplication

Reduplication is more prominent in verbs than in nouns. Full reduplication of the root can optionally be used to indicate greater intensity, but partial reduplication is used in verbal paradigms.

TODO example sentences

|R<sub>i</sub>~| indicates full reduplication of the initial syllable, and |~R<sub>f</sub>| indicates full reduplication of the final syllable.

## 8.5 | Conjugations

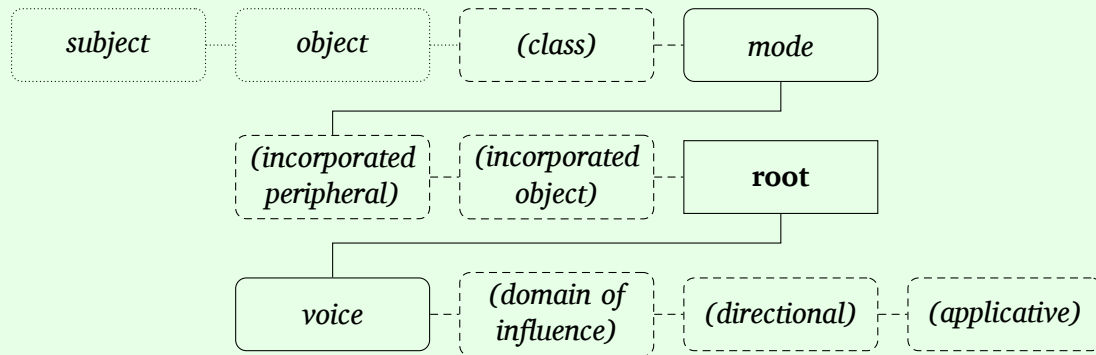

Figure 8.1: Conjugation Slots

In dependent clauses, verbs are *deranked*—they take a more limited inflection template.

Figure 8.2: Deranked Conjugation Slots

### 8.5.1 | Pronominal Proclitics

*Pronominal proclitics* are obligatorily appended to verb phrases and must agree with their respective argument. Pronouns are dropped when pronominal proclitics are present.

		Agt.	Pat.	Erg.			Agt.	Pat.	Erg.
Stbl.	1	lə=	le(h)=	jə́(N)=		1	ká=	tà(?)=	tà(?)=
	2	nó=	nɔ=	nò=		2	nó=(ó)	nəw=, no=	no=
	3	tá=	té(h)=	tɛ̀à(N)=		3	sá=	se(h)=	kí(N)=
Nstbl.	1	to=	tò=	tʔáw=, tʔó=	(b) Incomplete				
	2	nɔ=(ó)	nó=(ò)	néj=, ní=					
	3	tʔó=	tʔə́(h)=	tɛ́hɔ(N)=					
			tʰɔ(N)=						

(a) Complete

Figure 8.3: Pronominal Proclitics

### 8.5.2 | Noun Incorporation

In certain verbs, object and peripheral nouns may be *incorporated*, or attached to, the verb. The incorporated noun may be phonologically reduced or even undergo suppletion. They are always placed directly before the verb root.

When an object noun is incorporated, the meaning of the phrase becomes more general, e.g., he chops the tree (a specific tree) vs. he chops trees (as a profession, in general). Furthermore, an incorporated noun is never in focus, allowing other parts of the statement to be emphasized.

Likewise, incorporated peripheral nouns are never in focus, but do not necessarily generalize the phrase. Incorporation of peripheral nouns, especially instruments, is common.

Additionally, the incorporated noun may optionally be marked with a noun class prefix (see § 7.3.1). If it is a peripheral object, it may take an associative or locative case marker. The incorporated noun is not marked for anything else.

TODO example sentences

### 8.5.3 | Voice & Investment

The verbal voices in Timah are symmetric, i.e., they do not alter the valency of the verb, only the arguments' roles.

Voice indicators also inflect for the *investment* of the subject. This indicates that the subject has some sort of interest or stake pertaining to the action, e.g., give (uninvested) vs. loan (invested).

	<i>Uninvested</i>	<i>Invested</i>
<i>Actor</i>	-tá	-tɕà
<i>Undergoer</i>	-sʔʔʔ	-jéà
<i>Correlative</i>	-mótè	

Figure 8.4: Voice

The *correlative* voice indicates that both the agent and patient are in some way related; it is often used for reflexive constructs, but can also be used for reciprocal constructs.

(8) **lɔlajmólámótè**

lɔ=                      laj-                      mólá -mótè  
1.STBL.AGT.CMPLT= PFV.CMPLT- wash -CV  
I wash myself

(9) **tolajmólámótè**

to=                      laj-                      mólá -mótè  
1.STBL.AGT.CMPLT= PFV.CMPLT- wash -CV  
we wash ourselves

(10) **totòlajmólámótè**

to=                      tò=                      laj-                      mólá -mótè  
1.STBL.AGT.CMPLT= 1.STBL.PAT.CMPLT= PFV.CMPLT- wash -CV  
we wash each other

### 8.5.4 | Domain of Influence

The *domain of influence* describes the area in which the object is able to be affected by the subject. With certain verbs this is fairly straightforward, e.g., sensory verbs—the domain of influence describes the area in which the subject can sense the object.

Verbs conjugate via suffixes for the presence of the object inside or outside the domain of influence of the subject.

- ́-N, -ná? : *inside the domain of influence*; ∈DOI
- -lǝ : *outside the domain of influence*; ∉DOI

Only multivalent verbs in either the actor or undergoer voices may be marked for domain of influence, i.e., avalent and monovalent verbs, and verbs in the correlative voice may not take domain of influence marking.

When verbs in which the object is understood to be inherently inside or outside the domain of influence take domain of influence marking it indicates success or failure of the verb.

(11) **hònmóó jǝntǝlajʔanátálǝ**

Ø-                      hòN -Ø                      =móó                      jǝN=                      tǝ=  
 CMPLT.ANIM.STBL- dog -CMPLT.AGT =REF.VIS.STBL 1.STBL.ERG= 3.STBL.ANIM.AGT=  
 laj-                      ʔaná -tǝ                      -lǝ  
 PFV.REAL- hit -AV.NINVST -∉DOI  
I (tried to) hit the dog

When pertaining to abstract concepts, the domain of influence instead describes the perceived attainability of the object (i.e., the subjective probability of it being able to enter the domain of influence).

(12) **hònsisʔi lǝtéhǝnǝtǝàn**

Ø-                      hòN -si                      =sʔi                      lǝ=                      tǝ=

 hǝnǝ -tǝà                      -lǝ  
 want -AV.INVST -∉DOI  
I want a dog (and believe this to be unattainable)

### 8.5.5 | Expressive Moods

There are five moods in Timah that are independent from basic moods. These are called *expressive moods*, and are placed at the beginning of a clause. They are considered *irrealis*.

TODO example sentences

- tɕɕ : **Imperative**; *commands, wishes, desires*; IMP
- s<sup>h</sup>a : **Interrogative**; *questions, requests*; INT
- tɔj : **Polar Interrogative**; *yes/no questions; tag questions*; POL
- kɪ : **Precative**; *polite requests and commands*; PREC
- tʔɔN : **Suggestive**; *suggestions, admonitions, warnings*; SUG

### 8.5.6 | Mood & Aspect

*Mood* and *aspect* (collectively called *mode*) are optionally marked using fused mood-aspect prefixes. All moods (expressive, basic, and evidential) are collectively called *modals*.

	<i>Imperfective</i>	<i>Habitual</i>	<i>Perfective</i>	<i>Experiential</i>	<i>Iterative</i>
<i>Realis</i>	∅-	kʔa(?)	laj-, le-	jɪhi-	R <sub>i</sub> -kʔa(?)
<i>Affirmative</i>	-R <sub>f</sub>	kʔa(?)√-R <sub>f</sub>	laj√-R <sub>f</sub> , le√-R <sub>f</sub>	jɪhi√-R <sub>f</sub>	R <sub>i</sub> -kʔa(?)√-R <sub>f</sub>
<i>Irrealis</i>	tɔ(?)	tew-, tə-	haj-, he-	já-	R <sub>i</sub> -tew-, R <sub>i</sub> -tə-

<i>Hypothetical</i>	tàj-, tè-		k <sup>h</sup> à-		R <sub>i</sub> -tàj-, R <sub>i</sub> -tè-

Figure 8.5: Aspect & Mood

The *realis* and *affirmative* moods are classed as *realis*, while the *irrealis*, *conditional*, and *hypothetical* moods are classed as *irrealis*.

#### • Moods

- **Realis** : *event is known to be real*; REAL
- **Affirmative** : *event is emphasized as being real*; AFF
- **Irrealis** : *event is unknown or known to be unreal*; IRR
- **Conditional** : *event is dependent upon other events*; COND
- **Hypothetical** : *event is unknown or counterfactual, but possible*; HYP

#### • Aspects

- **Imperfective** : *event is incomplete*; NPFV
- **Habitual** : *event is repeated across multiple timeframes*; HAB
- **Perfective** : *event is complete*; PFV
- **Experiential** : *event is experienced*; EXP
- **Iterative** : *event is repeated within the same timeframe*; ITER

### 8.5.6.1 | Conjugation of Mutable Roots

See § 6.1.2 for mutable root templates.

TODO redo this

		<i>Actor</i>	<i>Undergoer</i>	<i>Correlative</i>
<i>Realis</i>	<i>Npfv.</i>	<sub>1</sub> [o,o]	<sub>4</sub> [joo,e]	<sub>5</sub> [Cii,ɔ]
	<i>Hab.</i>	<sub>3</sub> [he,əə,e]	<sub>2</sub> [i]	<sub>3</sub> [Ca,ee,a]
	<i>Pfv.</i>	<sub>4</sub> [wi,a]	<sub>4</sub> [Cə,i]	<sub>1</sub> [ee,ə]
	<i>Exp.</i>	<sub>2</sub> [o]	<sub>1</sub> [aa,e]	<sub>4</sub> [mɔ,ə]
	<i>Iter.</i>	<sub>4</sub> [Cee,a]	<sub>2</sub> [ə]	<sub>2</sub> [a]
<i>Irrealis</i>	<i>Npfv./Hab.</i>	<sub>2</sub> [a]	<sub>3</sub> [se,i,a]	<sub>5</sub> [kʷoo,e]
	<i>Pfv./Exp.</i>	<sub>1</sub> [ə,ɔɔ]	<sub>5</sub> [na,aa]	<sub>5</sub> [li,ee]
	<i>Iter.</i>	<sub>5</sub> [Cə,i]	<sub>4</sub> [Cee,i]	<sub>1</sub> [i,ə]

Figure 8.6: Conjugation of Mutable Roots

Additionally, there is a set of affixes that inflect mutable roots.

- -R<sub>f</sub> : **Affirmative**; attaches to *realis* stem
- ?o- : **Conditional**; attaches to *irrealis* stem
- tāj-, tè- : **Hypothetical**; attaches to *irrealis* stem
- -tə̀à : **Invested**; attaches to actor or undergoer stem

### 8.5.7 | Evidential Moods

Timah optionally marks four levels of evidentiality (as well as a *quotative*), which express how the information was gathered. Evidentiality markers are placed before their head verb. They are considered *realis*.

TODO example sentences

- k<sup>h</sup>ek<sup>h</sup>ì : **Witness**; knows of event directly; WIT
- səsɔN : **Evidential Inferential**; knows of event via evidence; EVID
- tɔNke : **Anecdotal Inferential**; knows of event via prior experience(s); ANEC
- mɔ́hɔ : **Reportative**; knows of event indirectly; REP
- ?aj : **Quotative**; marks quoted speech, dialogue; can be used in conjunction with other evidentials; QUOT

### 8.5.8 | Directional Specifiers & Applicatives

The *venitive* and *andative* suffixes, collectively called *directional specifiers*, are commonly used with verbs of movement, such as **wó** move, walk, **s<sup>h</sup>ɔj** carry, give/take, and others. These are placed directly after the verb root.

TODO example sentences

- -tí : **Venitive**; *motion toward*; VEN
- -s<sup>h</sup>ɪ : **Andative**; *motion away from*; AND

*Applicatives* are valency-increasing operations that switch the syntactic position of the peripheral with that of the object. They are formed by appending an applicative suffix to the verb, which can be used in tandem with the venitive and andative markers in order to specify direction or efficiency. These are placed directly after the verb root and, if present, the directional specifier.

TODO example sentences

- -lí : **Relational**; *accompaniment*; REL
- -k<sup>h</sup>òN : **Beneficial**; *intent of benefit/purpose or reference/relation*; BEN
- -tʔɔʔ : **Causal**; *causation, final causation*; CAUS
- -kéh : **Complemental**; *similarity/comparison, state of being*; COMTL
- -tçò : **Locational**; *absolute physical or temporal location and movement*; LOCNL
- -sòʔ : **Positional**; *relative physical or temporal location and movement*; POSNL

The applicatives **-lí** and **-k<sup>h</sup>òN** may be used to invert the secundative construction (see § 5.1), making it indirective. This inversion does not change the clause semantically, only syntactically.

Further specifications can be made by supplementing the applicative suffix with a postposition (see § 7.4) placed after the object.

## 8.6 | Verbal Classifiers

*Verbal classifiers* are used with certain verbs to describe characteristics of the object, specifically integrity and *category*. It is most often used with verbs of handling.

TODO example sentences

	Complete		Incomplete
	Animate	Inanimate	
<i>Standing</i>	ʔi-	tàj-, tè	sahi-
<i>Sitting</i>	maa-		mií-
<i>Lying</i>	tçè-	tí(N)-	
<i>Generic</i>	kʔáj-, kʔí-		ʔɔj-, ʔə-

Figure 8.7: Verbal Classifiers

- **Standing**; *entity is taller than it is wide*; STA
- **Sitting**; *entity is as tall as it is wide*; SIT
- **Lying**; *entity is wider than it is tall*; LNG
- **Generic**; *unspecified category*; GEN

## 8.7 | Serial Verb Constructions

A *serial verb construction* (SVC) in Timah is a verb phrase that contains two or more verbs that, within the context of their clause, share the same inflections and one or more arguments. They may be *continuous* (the constituent verbs are placed adjacent to each other) or *discontinuous* (the constituent verbs are separated by an argument.)

*Continuous* SVCs obligatorily share the same subject and object, while *discontinuous* SVCs only obligatorily share the same subject (i.e they may take different objects).

TODO expand on specific SVCs

### 8.7.1 | Perceptive

*Perceptive* SVCs are always discontinuous, and express sensory interaction.

### 8.7.2 | Directive

*Directive* SVCs may be either continuous or discontinuous, and express movement or position.

### 8.7.3 | Capacitive

*Capacitive* SVCs are always continuous, and express ability, attitude, or causality.

## 8.8 | Copulae

Timah *copulae* are a subset of true verbs

Copulae only inflect for person and mood/aspect (see §§ 8.5.1 and 8.5.6), and the constituent arguments within a copular phrase (i.e., the subject and attribute) both take the (unmarked) agentive case (the attribute is marked like the object in copular person agreement).

As noted in § 5.1, all copular phrases have *Subject-Copula-Attribute* word order. Copulae are always considered monovalent, although pronominal proclitics agree identically as in polyvalent verbs.

Copulae are divided into three classes: *essential* (ESSNT), *existential* (EXIST), and *referential* (REF). These are further divided into the subclasses *assertive* (ASSRT), *negative* (NEG), and *revelatory* (REV).

The essential copulae express nominal and descriptive predication. The existential copulae express locational, existential, and possessive predication. The referential copulae, while traditionally classed as such due to how they pattern, do not act like the other two classes of copula. They may either refer to the inherent action of the subject or, if present, to the directly preceding verb. Additionally, referential copulae cannot refer to preceding copulae.

The assertive subclass expresses the basic form of the copula. The negatory subclass negates the copula. The revelatory subclass expresses surprise, doubt, and/or interest, and suppletes the assertive form of a copula when any irrealis modal is present (*see §§ 8.5.5 to 8.5.7*).

- **Essential**

- *kew* : **Assertive**
- *kələ* : **Negative**
- *ʔowó* : **Revelatory**

- **Existential**

- *nén* : **Assertive**
- *néjé* : **Negative**
- *təjə* : **Revelatory**

- **Referential**

- *t<sup>h</sup>əh* : **Assertive**
- *t<sup>h</sup>əné* : **Negative**
- *ʔəjtɕa* : **Revelatory**

## 9 | Descriptives & Derivation

There are twelve descriptives (which function as adjectives or adverbs) in Timah. They are placed before their head noun or verb. All descriptives may optionally be fully reduplicated to indicate greater intensity.

- tɕʰàné : *good, positive; full*
- sìnkà : *bad, negative; empty*
- kʰɔkʰɔ : *big, strong; many*
- tɕʰi : *small, weak; few*
- semóʔ : *fast; loud; hard, rough*
- ló : *slow; quiet; soft, smooth*
- sɔN : *short, wide; feminine*
- ʔin : *long, narrow; masculine*
- tɕósʰa : *white, light; fresh, new*
- káj : *warm (color); hot, dry*
- sɔtɕe : *cool (color); cold, wet*
- tʰawsá : *black, dark; stale, old*

### 9.1 | Comparison

Comparative constructions are formed by appending a postposition after the descriptive in a copular clause. The recipient of comparison is placed after the subject, i.e., *Subject-Recipient-Copula-Attribute*.

- sʰì : *positive comparison*
- míh : *equative comparison*
- tí : *negative comparison*

(14) ketehmóɔ tɕəʔitɕó sʰimóɔ tákew tɕósʰa

Ø-	keteh	-Ø	=móɔ	Ø-	tɕəʔi
ANIM.STBL.CMPLT-	child	-AGT.CMPLT	=REF.VIS.SG	ANIM.STBL.CMPLT-	person
-tɕó	sʰì	=móɔ	tá=	kew	tɕósʰa
-LOC.CMPLT	ABL	=REF.VIS.SG	3.STBL.ANIM.AGT.CMPLT=	COP.ESSNT.ASSRT	new
<u>the child is younger than the man</u>					

Superlative constructions are formed by appending *séè* all, every before the recipient, or using it in place of the recipient. Excessive constructions are formed by omitting the recipient entirely.

- (15) **ketehmów séè (tɛ̀ɔ̀ɪtɔ́) sʰi(mów) tákew tɔ́sʰa**  
 Ø- keteh -Ø =mów séè (Ø- tɛ̀ɔ̀ɪ

 -tɔ́) sʰi =(mów) tá= kew tɔ́sʰa  
 -LOC.CMPLT) ABL =(REF.VIS.SG) 3.STBL.ANIM.AGT.CMPLT= COP.ESSNT.ASSRT new  
the child is the youngest of all (men)
- (16) **ketehmów sʰi tákew tɔ́sʰa**  
 Ø- keteh -Ø =mów sʰi tá=  
 ANIM.STBL.CMPLT- child -AGT.CMPLT =REF.VIS.SG ABL 3.STBL.ANIM.AGT.CMPLT=  
 kew tɔ́sʰa  
 COP.ESSNT.ASSRT new  
the child is very/too young

## 9.2 | Derivation

Derivation is possible by appending a descriptive onto a noun or verb as a prefix. Additionally, there exists a small closed class of various derivational affixes.

### Prefixes

- tɔ́j-, tɔ́- : *opposite, reverse*
- tɛ́hà(?) : *person, profession*
- lə(h)-(ó) : *place; time*
- kósó- : *homorganic group/mass*
- kʰe- : *heterorganic group/mass*
- tɛ́á(N)-(ò) : *prevent, stop, interrupt*
- sáj-, sé- : *pretend, mimic, falsify*
- sóo- : *cause, source*
- ɪkə- : *expected accompaniment*

### Suffixes

- -tɛ́ʔá : *attempt, try*
- -táj : *product, result*
- (ó)-litó : *within a period of time*
- -kʔáʔe : *tool, instrument*
- (ò)-sʔoo : *abstraction, mass*
- -tɛ́i : *animals, inedible plants*
- -mitàn : *edible plants, food*
- -kosée : *pejorative, derogatory*
- -tɛ́i : *previous, former*
- (ó)-nə : *eventual, later*

## 10 | Function Words

---

### 10.1 | Conjunctions

There are two groups of conjunctions in Timah: *nominal* and *verbal*. *Nominal* conjunctions connect nouns, noun phrases, and descriptives; *verbal* conjunctions connect verbs and verb phrases, and can be used to introduce clauses.

- **Nominal**

- ní : *presents non-contrast*
- ʔika : *presents contrast*
- teh : *presents alternative*

- **Verbal**

- nəj : *presents non-contrast; introduces basic (dependent) clause*
- ten : *presents rationale, causality; introduces causal (dependent) clause*
- motó : *presents consequence; introduces consecutive (dependent) clause*
- ʔihi : *presents contrast*
- kàh : *presents alternative*

### 10.2 | Satellite Conjunctions

Conjunctions may be used initially or finally in a statement as discourse markers.

- ní : *indicates weak affirmation of the statement*
- ʔika : *inquires weak affirmation of the listener's experience*
- teh : *indicates surprise, doubt, or interest toward the statement*
- nəj : *indicates strong affirmation and/or discourse-completion of the statement*
- ten : *indicates agreement with the listener*
- motó : *inquires strong affirmation of the listener's experience*
- ʔihi : *inquires contrast of the listener's experience to the speaker's statement*
- kàh : *requests more information from the listener*

#### 10.2.1 | Ellipsis

(17) kawmeləsi ləhaniwitá nəj tó? kawk<sup>h</sup>ətàjsi

kaw-	melə	-si	lə=	ha=	niwi	-tá

nəj	tó?	kaw-	k <sup>h</sup> ətàj	-si		
and.VRBL	3.STBL.ANIM.AGT	INAN.STBL.CMPLT-	milk	-PAT.CMPLT		
<u>I eat bread and he (eats) milk</u>						

## 10.3 | Affirmatory & Negatory

- **Affirmatory**

- séN : **Affirmatory-Basic**; *affirms with no regard to evidence*
- s<sup>h</sup>è : **Affirmatory-Witness**; *affirms via visual evidence*
- s<sup>h</sup>ò : **Affirmatory-Sensory**; *affirms via non-visual evidence*
- s<sup>ʔ</sup>ó : **Affirmatory-Evidential**; *affirms via direct evidence*
- tɕ<sup>ʔ</sup>én : **Affirmatory-Anecdotal**; *affirms via prior experience(s)*
- jón : **Affirmatory-Reportative**; *affirms via indirect evidence*

- **Negatory**

- káj : **Negatory-Basic**; *negates with no regard to evidence*
- k<sup>h</sup>àj : **Negatory-Sensory**; *negates via sensory/direct evidence*
- sáj : **Negatory-Inferential**; *negates via direct evidence/prior experience(s)*
- wáj : **Negatory-Reportative**; *negates via indirect evidence*

## 11 | Numerals

---

Timah uses a base-60 numeral system. This is not a pure base-60 system orthographically, as it uses base-12 as a sub-base to construct the constituent numeric symbols.

0	ʔi	12	tɕíha	24	sín	36	sekó	48	t <sup>h</sup> àse
1	t <sup>h</sup> è	13	tɕʔəə	25	kon	37	hino	49	s <sup>h</sup> ii
2	nin	14	nəʔah	26	ʔəəha	38	s <sup>h</sup> əə	50	sʔóo
3	kɔ	15	s <sup>h</sup> a	27	t <sup>h</sup> aà	39	tè	51	k <sup>h</sup> ǝj
4	k <sup>h</sup> ì	16	s <sup>h</sup> ɔh	28	tòo	40	kʔǝʔ	52	lɔʔen

Figure 11.1: Numerals

## 12 | Register & Kinship Terms

There is a system of social register terms in Timah that are used to describe the social relations between the speaker and listener, especially between family members and members within a community.

TODO tikz chart for kinship terms

	<i>Inferior</i>			<i>Equivalent</i>			<i>Superior</i>		
	<i>Younger</i>	<i>Equal</i>	<i>Elder</i>	<i>Younger</i>	<i>Equal</i>	<i>Elder</i>	<i>Younger</i>	<i>Equal</i>	<i>Elder</i>
<i>Formal</i>	tèhah		waj	kátç <sup>h</sup> è	s <sup>h</sup> ò	s <sup>h</sup> əw	létça?	jó?oh	sako
<i>Polite</i>	lɔj	tç <sup>h</sup> aw	tçoo	sóhkəh		wo?ɔ	k <sup>h</sup> emé	mii?í	
<i>Familiar</i>		tç <sup>h</sup> ɔs <sup>h</sup> ə	to?a	k <sup>h</sup> a		t <sup>h</sup> ii?ɔj	t <sup>h</sup> ítçín		t <sup>h</sup> è
<i>Pejorative</i>		kəj		ketç <sup>h</sup> ɔ			k <sup>h</sup> èle		

Figure 12.1: Register Terms

## 13 | Ideophones

### 13.1 | Ideophonemes

There exists a set of phonemes in Timah that can appear only in ideophones. These are called *ideophonemes*, and they cannot cluster (i.e., codae /ʔ h ɳ w j/ may not precede them). Basic consonants can appear in ideophones, but ideophones are restricted to a reduced vowel inventory.

	<i>Labial</i>	<i>Alveolar</i>	<i>Dorsal</i>		<i>Dental</i>	<i>Alveolar</i>	<i>Lateral</i>
				<i>Tenuis</i>		!	
<i>Nasal</i>	<sup>m</sup> b	<sup>n</sup> d	<sup>ŋ</sup> g-ŋ	<i>Aspirate</i>	<sup>h</sup>	! <sup>h</sup>	<sup>h</sup>
<i>Liquid</i>	<sup>l</sup> ɸ B		<sup>ʀ</sup> χ R-B	<i>Nasal</i>	ɳ	ɳ!	ɳ
	<i>(a) Pulmonic</i>			<i>Glottal</i>	ɳ  <sup>ʔ</sup>	ɳ! <sup>ʔ</sup>	ɳ   <sup>ʔ</sup>
				<i>(b) Non-pulmonic</i>			
							
				<i>(c) Vowels</i>			

Figure 13.1: Ideophonemes

Additionally, the syllabic nasals /ɱ ɳ ɲ/ also appear, but only in isolation.

### 13.2 | Ideophones

There are three types of ideophones in Timah: *phonomimes*, *phenomimes*, and *psychomimes*. See App. D for a list of ideophones.

- **Phonomimes**; *imitate sounds directly*; PHON
- **Phenomimes**; *imitate sounds associated with tangible states and conditions*; PHEN
- **Psychomimes**; *imitate sounds associated with intangible states and conditions*; PSYCH

## 14 | Semantics & Pragmatics

---

### 14.1 | Topic & Focus

*Topic* and *focus* are important elements of discourse in Timah. Under certain circumstances (see § 5.2), the presence of explicit topic-fronting and/or focus-marking can change which alignment is used. Variably-aligned statements default to the active-stative alignment, but take the ergative-absolutive alignment when the speaker wishes to emphasize or topicalize the subject.

In general, the topic marks known or old information, while the focus marks unknown or new information.

#### 14.1.1 | Topic & Focus Marking

The *topic* of a clause can be explicitly marked by changing the alignment of a variably-aligned clause to ergative-absolutive. In invariably-aligned clauses, the topic is explicitly marked by fronting the topicalized argument.

The topic strongly correlates to the subject of the clause, but this is not always the case. If the speaker wishes to emphasize the object, the arguments must be switched and the verb put into the undergoer voice (see § 8.5.3).

The *focus* of a clause can be explicitly marked by appending one of three *focus markers* before the head of the phrase containing the focus.

TODO example sentences, expand on topic/focus stuff

- k<sup>2</sup>itò : *focuses the entire phrase*
- tàá : *focuses the head of the phrase*
- kò : *focuses the dependents of the phrase*

The specific focus will always be intonationally emphasized.

### 14.2 | Deixis

#### 14.2.1 | Spatial/Temporal Deixis & Domains

The deictic space of Timah is divided into three main domains: *anterior-sinister*, *anterior-dexter*, and *posterior*.

Figure 14.1: Deictic Space

## 15 | Speech Registers

---

There exists three special *speech registers* in Timah. While identical in grammar, these registers differ in lexicon content and size.

- **Nuptial Register**; *used by people who are or have been in an intimate relationship*
  - **Internal Subregister**; *used when speaking directly to one's intimate partner*
  - **External Subregister**; *used by people who are or have been in a relationship, with no regard to the status of the listener*
- **Avoidance Register**; *used when speaking to and around one's previous intimate partners*
- **Foreign Register**; *used when around foreigners, i.e., non-Khokan people*
  - **Positive Subregister**; *used when speaking to foreigners that are considered favorable by the speaker*
  - **Negative Subregister**; *used when speaking to foreigners that are considered hostile by the speaker*

TODO all of this

## | Appendices

---

Within these dictionary appendices, entries are notated as *word (reduced form) : (inherent inflections/classes) definition*. Arguments in parentheses do not appear for all entries.

Entries followed by a superscript *NI NX A FP FN* correspond to the nuptial internal, nuptial external, avoidance, foreign positive, and foreign negative registers, respectively (*see Ch. 12*).

TODO all of this
